

Wisdomshow DS-3200 X-Ray Automatic Counting Machine with 99% Accuracy and 17-inch Detector for SMT Electronic Components

Our Product Introduction

Basic Information

- Place of Origin: Guangdong, China
- Brand Name: Wisdomshow
- Minimum Order Quantity: 1
- Price: CN¥546,642.40

Product Specification

- Weight: 2500 Kg
- Power: 2400 W
- Voltage: 220V/110V
- Feeding Speed: 4-8s
- Loading Capacity: 10kg
- Equipment Size: 4500*1200*2118mm
- Equipment Weight: 2800kg
- Image Size: 430*430mm
- Detector Size: 17-inch
- Counting Accuracy: 99%
- X-ray Tube: American VJ
- Material Plates: Four 7-inch Or One 13-17-inch
- Algorithm: AI Deep Learning
- Data Upload: Cloud Database
- Display: 17-inch Ultra-clear Screen

Product Description

Wisdomshow DS-3200 X-Ray Automatic Counting Machine

The DS-3200 is an advanced online automatic counting machine that utilizes X-ray technology with 99% accuracy for SMT electronic components. Featuring a 17-inch detector and AI-powered software, this system revolutionizes component counting and inventory management.

Key Features & Technology

The DS-3200 employs X-ray perspective principles combined with proprietary AI algorithm software to rapidly and accurately count components in trays, with automatic scan code upload and data integration with MSE, ERP, and other systems.

Advanced Hardware Components

American VJ X-ray tube for long life and maintenance-free operation
17-inch ultra-clear flat-panel detector for fast, distortion-free imaging
Simultaneous counting of four 7-inch material plates or one 13-17 inch plate

Operational Benefits

Significantly reduces counting time and eliminates manual labor requirements
Enables staff reallocation to other production tasks
Minimizes line changeover and downtime
Digital data output for barcode printing or direct database upload

Inventory Management Advantages

The DS-3200 counting machine dramatically improves material shortage prevention, reduces loss and leakage, and enables digital management of material storage. This results in lower inventory costs and improved inventory accuracy.

Non-Invasive Counting

No need to open packaging bags, maintaining coil integrity and material moisture resistance.

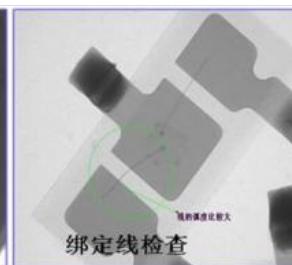

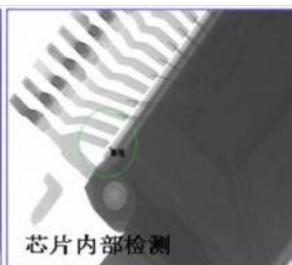

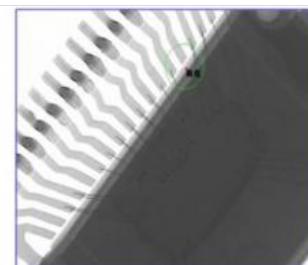

AI Deep Learning Technology

Our proprietary software utilizes artificial intelligence deep learning algorithms that automatically identify components and apply appropriate counting algorithms without manual binding.

Learning Capabilities

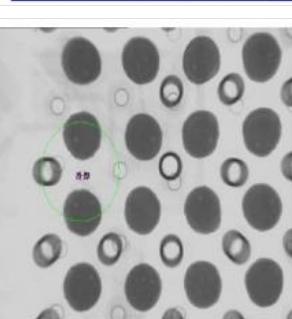

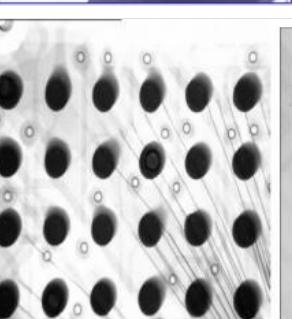

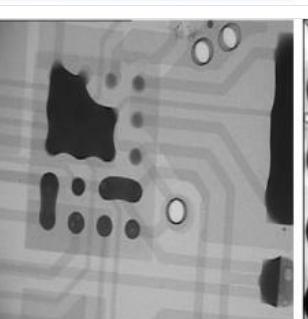

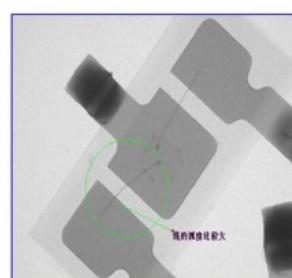

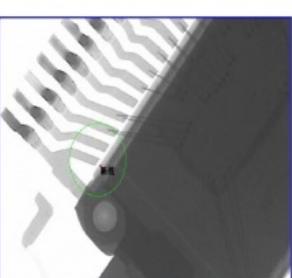

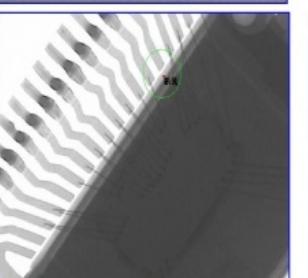

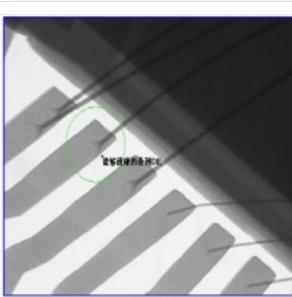

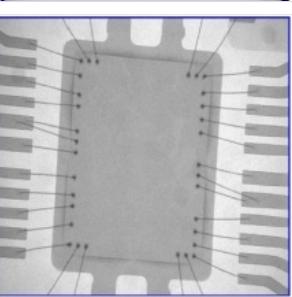

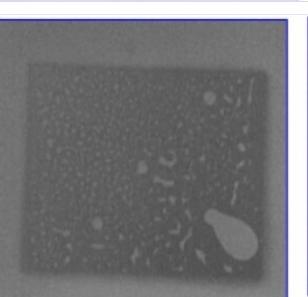

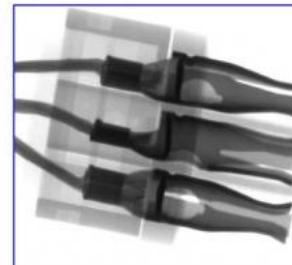

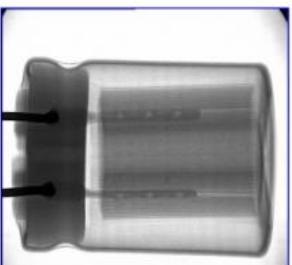

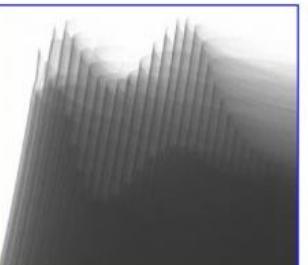

- Length-width ratio analysis
- Component corner angle measurement
- Internal to external component slope calculation
- Image deformation pattern recognition

As component counting operations increase, the system becomes progressively more accurate. The AI can easily handle similar components and larger plates with enhanced precision over time.

In-Chip Detection

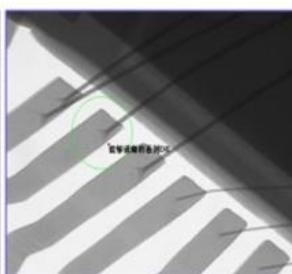

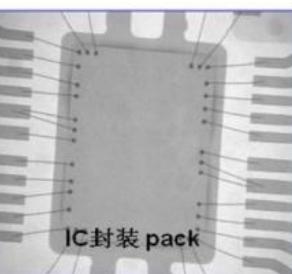

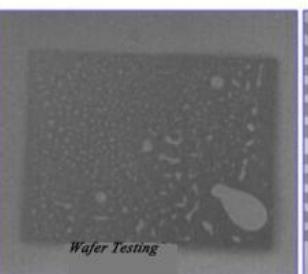

Binding Line Detection

Continuous Tin Electrodeposit

Skewing

Cold Welding

Cloud Database Integration

All counting data and images are uploaded to our secure cloud platform. Our engineering team continuously optimizes algorithms based on data collected from all deployed devices, with regular updates pushed to customer databases.

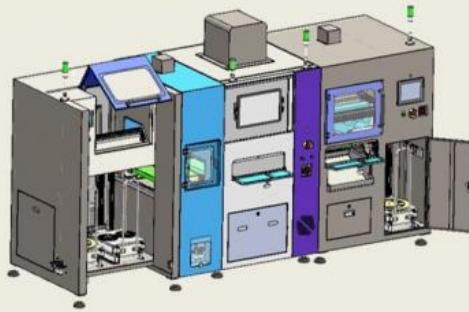

Over time, counting accuracy approaches 100% with expanding component coverage. When new components are encountered, existing

database matches enable immediate software updates for higher efficiency and accuracy.

Shenzhen WisdomShow Technology Co., Ltd.

Wisdom and Innovation, Sincere in Service,
Refine on the Quality, Looking Forward to the Future

DS-3200 online counting machine

Factory Introduction

Shenzhen Wisdomshow Technology Co., Ltd is an enterprise of X-Ray inspection equipment, X-Ray counting machine and BGA rework station integrating R&D, production, sales, trade and service.

Our company appoints talents, continuously introduces high-end talents, employees have a strong team spirit, has built an online sales platform and communication system, and guarantees to provide excellent after-sales service, so that the company has won good reputation and evaluation at home and abroad.

We has set up sales and service outlets in more than 30 countries including the United States, Italy, Poland, Brazil, India, Algeria, Thailand, and Vietnam. After years of continuous efforts, our products have accumulated a good reputation.

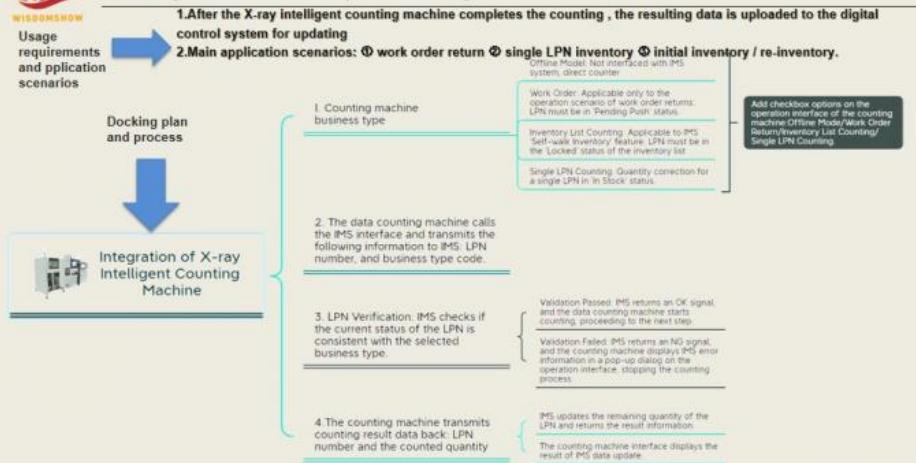

1-1 Intelligent Warehousing Operation Process

Usage
requirements
and application
scenarios

1-2 Digital Control System Integration Solution and Process

1-3 Introduction to Label Template Printing Rules

2-1 Equipment Advantage

1.High Level of Automation:

Achieve fully automated counting, printing, labeling, and material handling in intelligent online inspection operations. Digitally manage material storage to reduce inventory costs and enhance material counting accuracy.

2.High Detection Accuracy:

Based on AI intelligent recognition algorithms, the detection accuracy is excellent. The calculation accuracy for conventional components exceeds 99.99%. Equipped with a high-definition camera and proprietary intelligent algorithms, it achieves high scan code recognition rates and precise labeling.

3.Strong Detection Adaptability:

Suitable for various types of surface mount components (SMD). It has high compatibility and can rapidly and accurately detect 7-15 inch reels (upgradeable to 17 inches), Jedec Trays, IC moisture-sensitive packages, and other materials. No need to unpack for detection, preserving the integrity of the reel and not affecting moisture resistance.

4.User-Friendly Detection:

Counting data is automatically recorded and output, supporting integration with digital control systems. The system enables fully automated online detection without manual intervention. Customizable fully automatic loading and unloading modules flexibly adapt to various production scenarios.

5.High Detection Efficiency:

Detection speed is 8-10 seconds per reel, significantly improving efficiency and reducing the need for manual labor.

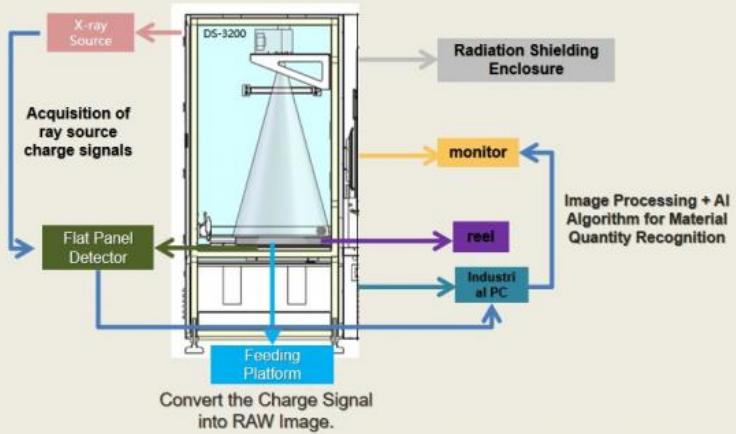

6.Equipment Related Qualifications:

This product obtains the exemption certificate, radiation safety is guaranteed, at the same time can let the user exempt: operator occupational health physical examination, participate in the "nuclear technology use of radiation safety and protection examination" to obtain a certificate on the job, the equipment placed in a specific area and other ancillary work.

2-4 Introduction to Parameters

DS-3200 Intelligent online Counting Machine

X-ray Source	
Tube Voltage	80KV
Tube Current	0.2mA
Cooling Method	Air Cooling
Focus Size	35μm
X-ray Radiation Angle	30°
Radiation Safety	< 1uSv/hr (International Standards)

Flat Panel Detector

Detector Type	Non-Silicon Crystal 17-inch Flat Panel
Pixel Matrix	3072*3072
Pixel Size	140μm
Image Size	430*430mm
Detector Size	470*470*35mm
Image Output Time	1s

Counting Parameters

Max Tray Size	17 inch
Max Tray Thickness	100mm
Compatible Mini Component Size	Imperial 01005
Counting Speed	22 seconds (for the entire process)
Counting Accuracy	99.99% (01005 for ex.)
Worktable Size	430mm*430mm
Worktable Load Capacity	10KG

Equipment Specifications

Total Power	1.5KW
Equipment Dimensions	3470*1290*2100mm
Equipment Weight	about 1500KG
Unloading Method	Left to Right/ Right to Left
Air Pressure	0.5Mpa
Power Supply Voltage	220V 50-60Hz

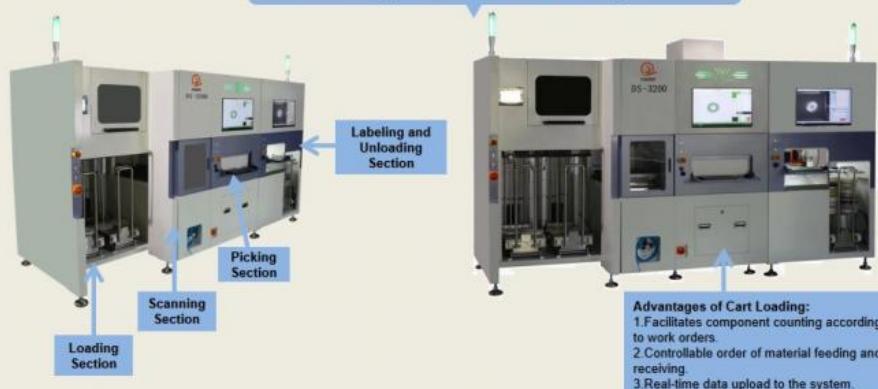

3-1 Online Component Counting Application Scenario (AGV Loading - CW Customer)

Example of Online Automatic Component Counting Application with AGV (Automated Guided Vehicle) Transport Cart

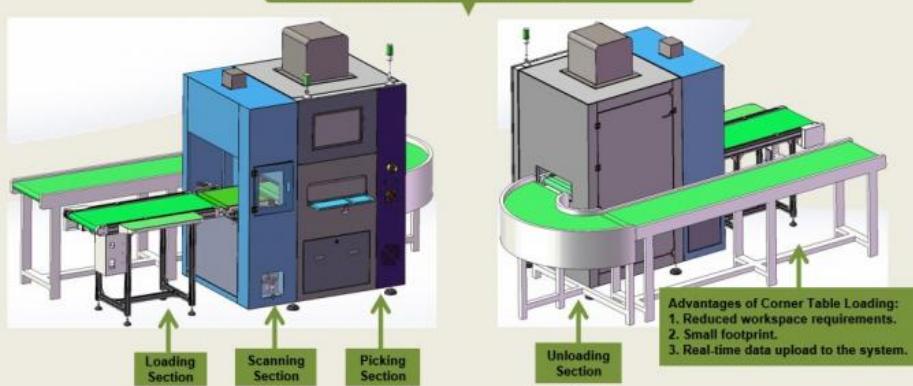

3-2 Online Component Counting Application Scenario (Cart Loading - DX Customer)

Example of Online Automatic Component Counting Application with Cart Loading

3-1 Online Component Counting Application Scenario (Corner Dock Loading - ZY Customer)

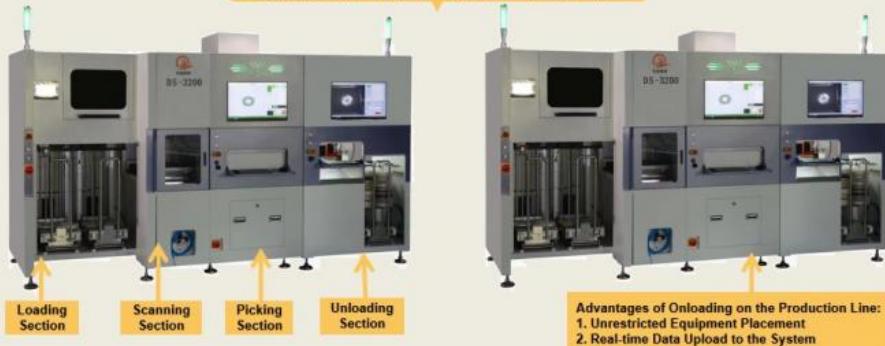

Example of Online Automatic Component Counting Application with Corner Dock Loading

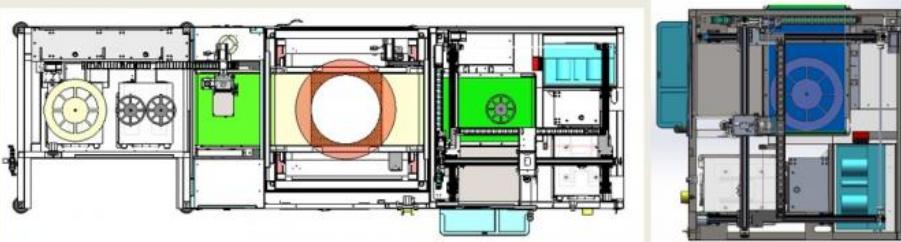

3-3 Inline Ordering Application Scenarios (Assembly Line Loading - HK Customers)

Example of Online Automatic Component Counting Application in Conjunction with a Production Line

4 Automatic labeling function introduction

1. Through machine vision positioning, using high-definition cameras and proprietary intelligent algorithms, automatic labeling on the material tray can be achieved.
2. After automatic counting: automatically print a new label and affix it.
3. The new label can cover the original label on the tray, and the covering accuracy can reach 98%.
4. The new label can also be affixed to any position on the material tray.

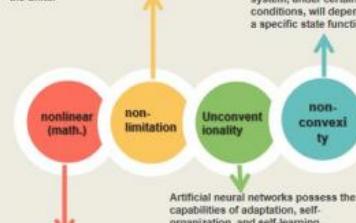

5-1 AI and Algorithms

1. Software Neuron Algorithm

A neural network is typically composed of multiple neurons widely interconnected. The overall behavior of a system depends not only on the individual characteristics of each neuron but may be primarily determined by the interactions and connections between the units.

The evolution direction of a system, under certain conditions, will depend on a specific state function.

2. Artificial Intelligence Deep Learning Algorithms

1. The pick-and-place software utilizes artificial intelligence deep learning algorithms.
2. There is no need to bind components and algorithms; instead, AI is employed to automatically identify components and apply algorithms.
3. The algorithm can learn data from previously picked components, including:
 - Aspect ratio
 - Angles at each corner of the component
 - Slopes between components from the innermost to the outermost
 - Deformation patterns of component images from the innermost to the outermost, and so on.
4. As the number of component pick-and-place iterations increases, the accuracy of the picking results improves. The system becomes more adept at handling similar components and larger trays with ease.

3. Intelligent database

1. The equipment software adopts machine learning algorithms for automatic learning.
2. It analyzes a large volume of data records, automatically updating and fine-tuning the database.
3. Over time, the accuracy of equipment pick-and-place operations will approach 100%.
4. The coverage of component types will also become increasingly extensive.

5-2 Software Features

The software interface includes a control panel with X-RAY parameters (Time: 0 h 2 min, Voltage: 24.1 °C, 2.0 KV, 50.0 mA, 0.50 mA), a 'Counting Report' table, a 'foreign object detection' image, and a 'Integration with MES/ERP and other systems' configuration screen.

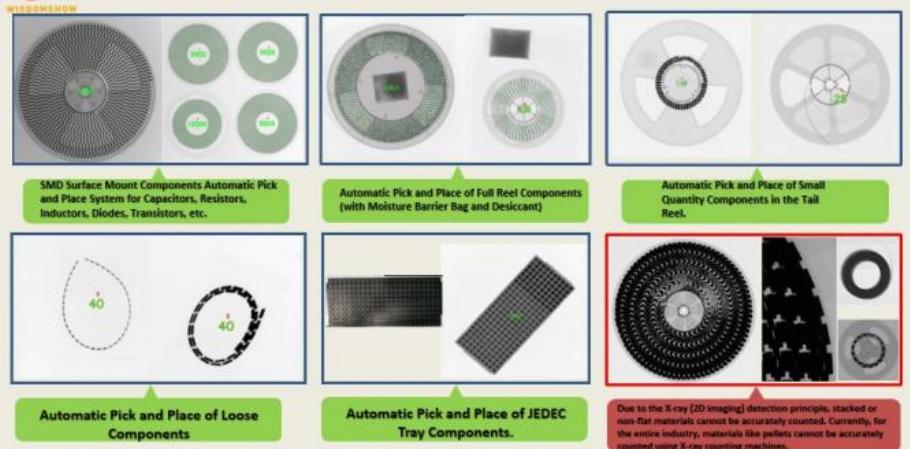

5-3 Speed & Accuracy

- 1.X-ray counting machine can be integrated with SMT residual material counting for enhanced intelligent warehousing;
- 2.Capable of counting four reels simultaneously, taking as little as 8 seconds, a single machine can save labor equivalent to 5-7 personnel.
- 3.Enhance the efficiency, reliability, and data-driven management of residual material counting and material warehousing.
- 4.For unconventional materials with inaccurate counting, provide model algorithm optimization updates, achievable within 24 hours.
- 5.As of now, the counting time and accuracy for materials of various sizes are as follows:

Name	Material Dimensions	Accuracy	Name	Material Dimensions	Accuracy	Name	Material Dimensions	Accuracy	Name	Material Dimensions	Accuracy	
Resistor	01005	99.95%	Capacitor	01005	99.99%	Inductor	CD32	99.99%	Diode	2N7000	100.00%

Packing & Shipping

Standard export wooden cases for secure transportation

Delivery within 2 workdays after payment confirmation

Shipping via TNT, DHL, FEDEX, air, or sea freight

Loading ports: Shenzhen or Hong Kong

Why Choose Wisdomshow Technology?

- Direct Manufacturer** - Complete control from design to assembly
- 12+ Years Experience** - Over 20 R&D engineers specializing in PCB/BGA technology
- Industry Leader** - Largest BGA rework factory in China
- Trusted Supplier** - Vendor to HUAWEI, TCL, ZTE, MEIZU, KONKA, LENOVO, FOXCONN
- Global Reach** - Over 100,000 users worldwide
- Superior Service** - Speedy customer support with lifetime after-sales service
- Efficient Delivery** - Worldwide shipping with precision handling

Our Services

Customer Support

- 12-hour inquiry response time
- Direct manufacturer pricing
- One-year warranty with free training and lifetime technical support
- Comprehensive global shipping options with tracking
- Professional after-sales service team
- Complete manual and demonstration video included
- Flexible payment terms: T/T, Western Union, PayPal, Alibaba Pay, credit cards

Quality Assurance

- Comprehensive quality control with independent QA/QC inspectors
- CE & ISO certified products
- Free spare parts during 12-month warranty period

Demo operation videos for training
24-hour technical support response

Company Profile

Shenzhen Wisdomshow Technology Co., LTD. is a professional BGA rework station manufacturer committed to "professional, integrity, excellence, customer first" business philosophy.

Leading manufacturer of BGA rework stations
Over 10 years of industry experience
CE Certificate and ISO certified products
100% QC inspection before shipment
Customized branding available
Significant global market share

Frequently Asked Questions

Operation & Training

Q: Is this machine easy to operate for first-time users?

A: Yes, we provide comprehensive English manuals and guide videos. The machine supports both Chinese and English languages. Additional support is available via email, Skype, phone, video call, or Alibaba online service.

Technical Support

Q: What if the machine has problems?

A: We provide free parts replacement during the one-year warranty period.

Shipping & Packaging

Q: Is the packaging safe for delivery?

A: All machines are securely packed in standard strong wooden cartons with protective foam interior.

Payment Options

Q: What payment methods do you accept?

A: We accept bank transfer, Western Union, MoneyGram, PayPal, Alibaba Pay, AliExpress Pay, and credit cards.

Order with Confidence!

We understand concerns about ordering from China. Our company participates in Alibaba Trade Assurance. If we don't meet contract requirements for on-time shipment or product quality, Alibaba may refund your payment as stated in your contract.
